

**MICRO LIGHT SMART PHONE PACK**

The Micro Light Smart phone Pack is a dual wield light that comes complete with a pair of microtools for smart phone users. Each set will also be accompanied by a smart phone stand and cleaner, offering you a flashlight for each hand. After all, you cannot tell just when disaster will strike, but there is one thing you will need to keep in mind - make sure there are spare CR1616 batteries around the home which can be easily accessible as the batteries on this thing might just die out during the most inopportune of moments.

**RECHARGEABLE SPEAKERS**

The rechargeable speakers bring practicality and fun to the world of portable speakers. These collapsible speakers come with a 2 in 1 cable enabling charge from a USB device and output via standard 3.5 mm audio plug. The lithium ion battery will get you 2 hours of playback - enough to typically get you back to a power source. The vacuum bass design gives hearty volume and bass too. But the fun angle of these speakers is the fact they change colour - green, red, blue, yellow. If you need portable speakers, why not make them rechargeable? And add a little colour to your life at the same time.

**FULL PHRASE TALKING TRANSLATOR**

This is able to instantly display translations to and from English for 210,000 common travel phrases, or rather, 1.8 million words in 24 European languages, three Asian languages, English, Arabic, or Hindi. The dictionary that powers this translator would be the New Oxford American Dictionary, and it is smart enough to maintain a history of searched terms so that you can create a favourites list for commonly used phrases. It roughly measures the size of a smart phone.

**FOUR IN ONE POWER CHARGER**

The name is logical because you have four methods to get power: standard wall plug, car charger, USB and 9 volt battery and one because you route which ever type of power into a standard USB connector with a retractable cord. Add an adaptor - many of which are included with the unit - and you are charging. An LED connection indicator lets you know when you are charging. The unit is compatible with iPhone, Blackberry and other smartphones. But it also provides a great source for cameras or e-readers. The 4-in-1 works great for travel, camping or home use.
