

ROOMBA:

A VACUUM ROBOT TO CLEAN FLOORS

In the future robots will clean our houses. Robot Roomba is a small intelligent vacuum cleaner that is meant to work as quietly as possible. The Roomba comes with a docking station you connect to a wall socket on a place where you won't notice it. You schedule the Roomba and it automatically starts cleaning the floor. It has all kinds of sensors so it will make its way through rooms and avoid certain objects in its path in an intelligent way. And when cleaning is done, it finds its way back to the docking station to recharge.

WiFi LAPTOP BAG

This certainly makes more sense than the WiFi detecting glow-in-the-dark T-shirts we've been seeing around. The WiFi laptop bag has a little LCD display on the side to show you hotspot activity. Now you don't have to boot your laptop to search for open hotspots but you can simply check your laptop bag. If the signal is strong enough you can choose to boot your laptop and get online.

FOLDABLE BLUETOOTH KEYBOARD

Smart phones get smarter and almost every modern phone has access to the internet. This means a cell phone is no longer just for making phone calls, but for browsing the web, writing e-mails or updating your blog too. The 12 keys that used to be enough to enter a phone number just won't do anymore. Some phones solved this with touch screen handwriting recognition, others with a tiny button keyboard below the screen. The AAA battery powered gadget folds in two, has a stand-by time of 7000 hours, an operating time of 60 hours and works with pretty much every cell phone, smart phone or PDA that supports Bluetooth.

BLUETOOTH PILLOW HEADSET

For lazy boys and girls with a long distance relationship: get yourself an unlimited cell phone plan and the urban tool per cushion and you're good to go for at least 8 hours of wireless laying and talking. This is a Bluetooth headset in a pillow form factor. It has all the usual hands-free features like volume control, muting and redialing but also has a built-in camera and a washable coat. It runs on a rechargeable battery that has a standy-by time of 300 hours.
